

Why Should you own an Aquaria... ?

- ▶ You have clean and pure drinking water for you and your family for life.
- ▶ You don't have to depend on bottled drinking water anymore. Or the government water supply for drinking.
- ▶ We give a one year comprehensive guarantee and five years of warranty on all parts excepting moving parts and consumables.
- ▶ We assure of spare parts for the entire life of the machine.
- ▶ The Only consumer device that has a positive cost of ownership. You save by using... In just 1 year and 5 months, you get back the money you spent for buying the machine. If you use it only during the warranty period you save Rs. 2,80,000/- and if you use the machine for 25 years, you save 14 lakhs. This is not an imagination; there are other Scalene products that are being used by the people for more than 20 years.

▶ You should know; Scalene is a 24 year old organization; Scalene is present in 12 countries in all 4 continents. It produces some of the finest medical devices, oil and gas products, energy solutions, automation and robotics, food, and water. You would be surprised, we are so sure of our product that we have no service department... simple because our products rarely fail.

In 2007, a well known Indian Scientist and Inventor, who owns many international patents, Dr. Rajah Vijay Kumar, accidentally found that when water is subjected to sound waves in the range of millions of cycles per second, Nano-sized water particles were produced and under certain condition of pressure, temperature and wind velocity, this Nano-water can freeze at much higher temperatures forming Nano-Ice Crystals. First he tried to use this discovery to induce rain by vapor deposition with ground based cloud seeding, the experiment failed miserably. But a new technology was born that he named it as "The Rain Tunnel Technology" to create rain in a box with low energy. He thought that the rain in the box could be a source of drinking water some day for millions, who don't have drinking water.

Eight years of further research could finally produce a real household consumer product like a Refrigerator or a TV or Washing Machine that could produce 30 liters of the finest and cleanest drinking water on the planet, right in your kitchen or living room. He re-created water that existed on the planet 1500 years ago, before commercial farming and industrial revolution started. Balanced alkaline pH, Negative ORP, first time a naturally created liquid water that is an antioxidant, with naturally occurring essential minerals. The product was named Aquaria™, "the heavenly water". It took more than two year to optimize the machine to be affordable to the common man.

Aquaria Water is a Natural Antioxidant,....

JERUZ AGRO ENERGY FARMS PRIVATE LIMITED

B-13/14, Jamnanagar Society, Ghod Dod Road, Surat (Gujarat) 395007, India.

We Just Created a Drop of Life...

Did You Know...?

- ▶ Water is our lifeblood – it makes up 60% of our body, 70% of our brain, and 80% of our blood.
- ▶ One billion people lack access to an improved water supply - approximately one in six people on earth. A person can live weeks without food, but only days without water.
- ▶ Less than 1% of the world's fresh water (or about 0.007% of all water on earth) is readily accessible for direct human use.
- ▶ Millions of women and children spend several hours a day collecting water from distant, often polluted sources.
- ▶ Water systems fail at a rate of 50% or higher.
- ▶ Almost two in three people lacking access to clean water live on less than Rs.200/- a day.

Water-Related Disease....

- ▶ Every 8 seconds, a child dies from a water-related disease.
- ▶ For children under age five, water-related diseases are the leading cause of death.
- ▶ At any given time, half of the world's hospital beds are occupied by patients suffering from a water-related disease.
- ▶ 1.8 million children die each year from diarrhea – 4,900 deaths each day.
- ▶ No intervention has greater overall impact upon national development and public health than the provision of safe drinking water.
- ▶ Close to half of all adult people in developing countries are suffering at any given time from a health problem caused by water deficits.
- ▶ The water crisis claims more lives through disease than any war claims through guns.

Aquaria became a very special member of your family, because it fulfills a very special need for you and your family...

The purest form of drinking water, always. Let there be **Tsunami**, **Storm**, or even an **Earthquake**, your family will always have the basic lifeline **WATER**.

Go on... See what is so special about Aquaria Water..

Minerals Naturally found in Aquaria Water

Magnesium - Mg++

Human cells have some level of magnesium in them, an adult would need 300 to 400 mg of magnesium every day. Magnesium is important for the regulation of muscle contractions, nerve signal transmission, maintain compliance of Blood vessels thus reducing the risk of heart attack, activates energy producing enzymes and it is also important in maintaining bone structure. Magnesium deficiency can cause nervousness, lack of concentration, dizziness, and headaches or migraines. Like most natural water, Aquaria Water has 1.2 to 1.8 mg of magnesium per liter of water.

Calcium - Ca++

An adult human will need about 800 milligrams of calcium per day but teenagers need more calcium. Calcium is required for stabilizing bone structure, teeth, and cell membranes; ensuring nerve and muscle impulses are properly transmitted; and helping to prevent blood clotting. Calcium also plays an important role in skin allergies. Osteoporosis (brittle bones) and fractures become more common if your body is not getting enough calcium. Aquaria Water contains 2.1 to 2.6 mg of Calcium per liter of water.

Potassium - K+

If one gets 2 to 4 milligram of potassium per day, it is considered sufficient. Children and teenagers should take particular care in potassium intake, as potassium aids in cell growth during the growing age. The electrical potential and pressure of water between cells is regulated by potassium, thus ensuring that each cell gets enough food. Potassium plays a special role in muscle contraction and the formation and conduction of impulses of the heart. Potassium deficiency can weaken skeletal muscles and make smooth muscles tired. Typically Aquaria Water contains 0.40 to 0.52 mg of Potassium per liter of water.

Sodium - Na+

Depending on how much one exerts, sodium requirements would be higher. A typical person would require about 3 grams of sodium per day, but excessive physical stress can raise it up to fifteen grams or more. The cardiac (Heart's) metabolism is affected by sodium, and can cause rhythm changes in the heart pumping. But now a days, we rarely have to worry about sodium deficiency. Salt is an integral part of many foods. Sodium in Aquaria Water is about 0.5 to 0.9 mg per liter of water.

Contaminants;

Your drinking water today, contains a lot of contaminants; these contaminants have no odor, taste or colour. For example, Nitrate is one of the most common contaminate in drinking water. This contamination may come from fertilizer, animal waste products, decaying plant matter, septic tanks, or sewage treatment systems. For Example; the ability of blood to carry oxygen throughout the body may be impaired by very high nitrate contamination in drinking water; this may cause methemoglobinemia (also known as blue baby syndrome), Cancer, disruption of thyroid function, birth defects, and miscarriages are other health risks posed by high levels of nitrate. Nitrate in Aquaria water is **ZERO**. WHO states that nitrate of 0 to 1 mg/L is graded as superior drinking water. You should know nitrate is not removed by standard water softeners or filters, including carbon adsorption filters, UV etc, and boiling water actually increases the concentration of nitrate.

But did you know there are many more poisons that is possibly in your drinking water ? Atrazine, Aldrin, Dieldrin, Gamma-HCH (Lindane), Phorate, Alachlor, Alph-HCH, Chlorpyrifos, Delta HCH, DDT (op & pp -Isomers of DDT, DDE & DDD), Endosulfan (a B and sulphate), Methyl Parathion, Monocrotophos, 2,4 - Dichlorophenoxyacetic acid, Isoproturon, Beta HCH, Butachlor, Ethion, Malathion, Bromoform, Dibromochloromethane, Bromodichloromethane, Chloroform etc., All of them are powerful carcinogens (Cancer causing agents), You should be convinced by now that water is the main cause of cancer, and many other modern diseases, unfortunately we cannot BAN water.. We have tested for these poisons in Aquaria Water, and it is simply **ZERO**.

Alkaline pH.

Before commercial farming and the industrialization, drinking water on the planet had a pH between 7 and 8 with healthy levels of alkaline minerals. Today the chemical water you drink including from an RO filtering system is acidic and the body has to correct it by adding alkaline minerals like magnesium and calcium leached from your bones and muscles to convert your chemical water into drinking water.

Anti-oxidant.

Water is supposed to be a powerful antioxidant, to negate the harmful effects of oxidative free radicals formed as a results of breathing oxygen and metabolism, unfortunately the chemical water we drink today from our taps, or filters does the opposite, it produces more free radicals. The Aquaria Water has a negative oxidation reduction potential (-ORP), meaning it is capable of donating free electrons and thus acts to neutralize free radicals in your body and slows the oxidation (i.e., aging) process in your body.

Nano-clustered.

True drinking water always should have very small clusters this will largely increase hydration at cellular levels and thus the cell-water turnover (i.e., nutrients into the cells and toxins out). In Aquaria, the process of hyper-sonic precipitation, a natural way to make rain in the rain tunnel ensures that the water molecules do not form huge clusters.

Taste and Flavor.

Taste of the Aquaria Water is very natural and earthy, the flavor is like the "Scent of Rain" or Petrichor. Most people like this taste and scientists believe that humans appreciate the rain scent because ancestors may have relied on rainy weather for survival.

Water characteristics.

Water characteristics from various sources are shown below. Out of the tested water samples, the only water that has high pH and negative ORP is Aquaria Water, Ganges Water and Snow Melted Water from the foot hills of Himalayas in Nepal.

PH and Oxidation Reduction Potential of Different Waters

Water Type	pH	ORP
Leading Brand Bottled Drinking Water	6.23	+29
Leading branded RO water	6.52	+25
Unbranded RO water	5.21	+65
Tap Water	6.75	+27.5
Cauvery Water from Source	8.04	-45.8
ZAMZAM Water from Source	8.32	-61.8
Aquaria Water	7.41	-70.1
Snow Melted water from Himalayas	7.35	-25.2
River Ganges Water	7.30	-66.5

* Tested at SERI, Bangalore.

Quality of Aquaria Water is comparable to some of the best Natural Waters in the world.
